Continuation of 5. does NOT place the application in condition for allowance because: Murad et al does disclose the sub-cube in Col. 8, lines 15-20, where the two input calling pattern cubes are represented by two instances of the second level profile. In this case, the second level profile represents extracted call prototypes. Murad et al also disloses that the sub-cubes are each treated as a bag, and cell-wise comparison results are summarized based on bag overlap in both Fig. 4C, and in Col. 5, lines 23-45. This summarization is represented by clustering.
